

DIRECTIONAL BORING

Course Description –

The student is first introduced to terms and definitions as applied,

Then job safety is discussed, especially as it applies to boring.

Next time is spent on the very important aspect of locating, from contacting JULIE and DIGGER to hands-on locating on the job.

With equipment and tools on-site, every part of the operation of the boring machine from starting, maintenance, installation and removal of the drill and other parts are covered thoroughly.

Planning and executing a drill operation from start to finish is done hands-on with the equipment. A comprehensive written and hands-on test completes the course.
